- [Dorsett Atari First Aid and Safety FA](#)

This is an archive of the "First Aid and Safety" educational program published by Dorsett Educational Systems, Inc. in 1983. This was originally packaged as a set of 8 cassette tapes for use with Atari 400 and 800 computers and the Educational System Master Cartridge.

*****This material should not be used to learn first aid. Some techniques have changed significantly since is course was created. Contact your local Red Cross for information about first aid classes.*****

The "raw recordings" directory contains the unaltered recordings from cassette, one file per tape, with both sides of each tape in the same file. You probably don't want to use this folder.

The main files (fa1 through fa16) are likely the versions you want to use with your Atari or emulator.

These have been split into 16 files (one per tape side). The audio levels have had their volume normalized, as well as any pops and clicks removed, and subsequently repaired on the data tracks.

Each tape has been verified to work on the Altirra emulator.

Finally, photos of the cassette tapes are included.

The work of digitization and audio cleanup was done by Kay Savetz and Thomas Cherryhomes in June 2015.

Album: First Aid and Safety

Year: 1983

Original Format: Atari Educational System (Dorsett Talk & Teach)

Digital Format: Microsoft WAV, 2 channel, 16-bit 44100Hz sample rate

Digitized by: Kay Savetz/Thomas Cherryhomes

Tracks:

- fa1 The basic rules of safety
- fa2 Handling Equipment Safely
- fa3 Preventing Equipment Accidents
